Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Reinforced Plastic Composites Production apply to existing and new facilities with reinforced plastic composites (RPC) production operations and processes. New facilities include those that commenced construction or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR Part 63, Subpart WWWW.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is

inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

Any owner/operator subject to the provisions of this part shall maintain a file of these measurements, and retain the file for at least five years following the date of such measurements, maintenance reports, and records. All reports are sent to the delegated state or local authority. In the event that there is no such delegated authority, the reports are sent directly to the United States Environmental Protection Agency (EPA) regional office.

Form Numbers: None.

Respondents/affected entities: Facilities with RPC production operations and processes.

Respondent's obligation to respond: Mandatory (40 CFR Part 63, Subpart WWWW).

Estimated number of respondents: 600 (total).

Frequency of response: Initially, occasionally, and semiannually.

Total estimated burden: 20,900 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$2,580,000 (per year), includes \$476,000 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an increase in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This increase is not due to any program changes. The change in the burden and cost estimates occurred because the total number of respondents has increased, after accounting for anticipated industry growth over three years. The increase in O&M costs is due to the inclusion of the MACT compliance standard for SMC enclosure for one large facility, based on comment received from industry consultation.
